

Smart Irrigation

Tests by the Irrigation Association (IA) and the International Center for Water Technology at California State University in Fresno, have shown smart irrigation controllers to save up to 20 percent more water than traditional irrigation methods

The **SMART IRRIGATION-NABAT** solution offers the farmer a connected Mobile platform to monitor agricultural indicators and automate the irrigation system.

SMART IRRIGATION
NABAT

The **controllers** are the heart behind our system where the different **sensors** (soil, outdoor and indoor temperature and humidity) and actuators (like your water pump motors and LED lights) are connected to and link to the automation software.
